# Extensibility Cockpit

Overview about all extension objects of a business context in S/4HANA Cloud

Extensibility Cockpit

- End-to-end selection from solution scope, scope item to business context
- On further drill-down, see a full list of extendable objects for the selected business context
- See the already implemented extensions belonging to the filtered Business Context objects
- Respective links for navigation to objects and extensions, e.g. custom fields, standard APIs, CDS views

# SAP S/4HANA In-App Extensibility:

## In-App Key User Extensibility Scenarios

1. Adapt UIs  
show/hide/re-arrange/rename identifier of standard and custom fields
2. Create custom fields  
Define custom fields and publish it for dedicated CDS views, APIs, UIs  
DDIC is automatically generated, CDS views and OData services are automatically extended
3. Custom Analytics and Forms  
Assign defined custom fields for forms
4. Implement Custom Business Logic („BAdIs“)  
Implement business logic in 'Restricted ABAP'; access custom fields, read other objects via CDS views; call external web-based services

# SAP S/4HANA In-App Key User Extensibility: Custom Fields

## Custom Service Interfaces

## Custom Fields

Add fields to SAP standard objects

Name	Weight	YY1_Size

## Custom Fields

- Definition of custom fields
- Manage where to use: UIs, reports, forms, service interfaces, business scenario (data flows), search.

## Custom User Interface

## Custom Analytics

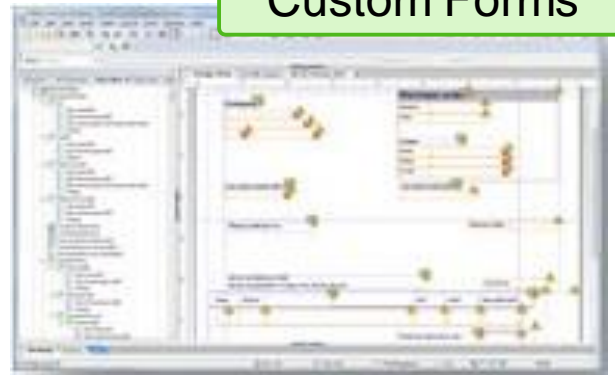

## Business Scenario

Scenarios Available for Business Context Purchasing Document (2)

Description
> Purchase Order to Delivery on header level
> Purchase Requisition Item to Purchasing Document Header

## Custom Forms

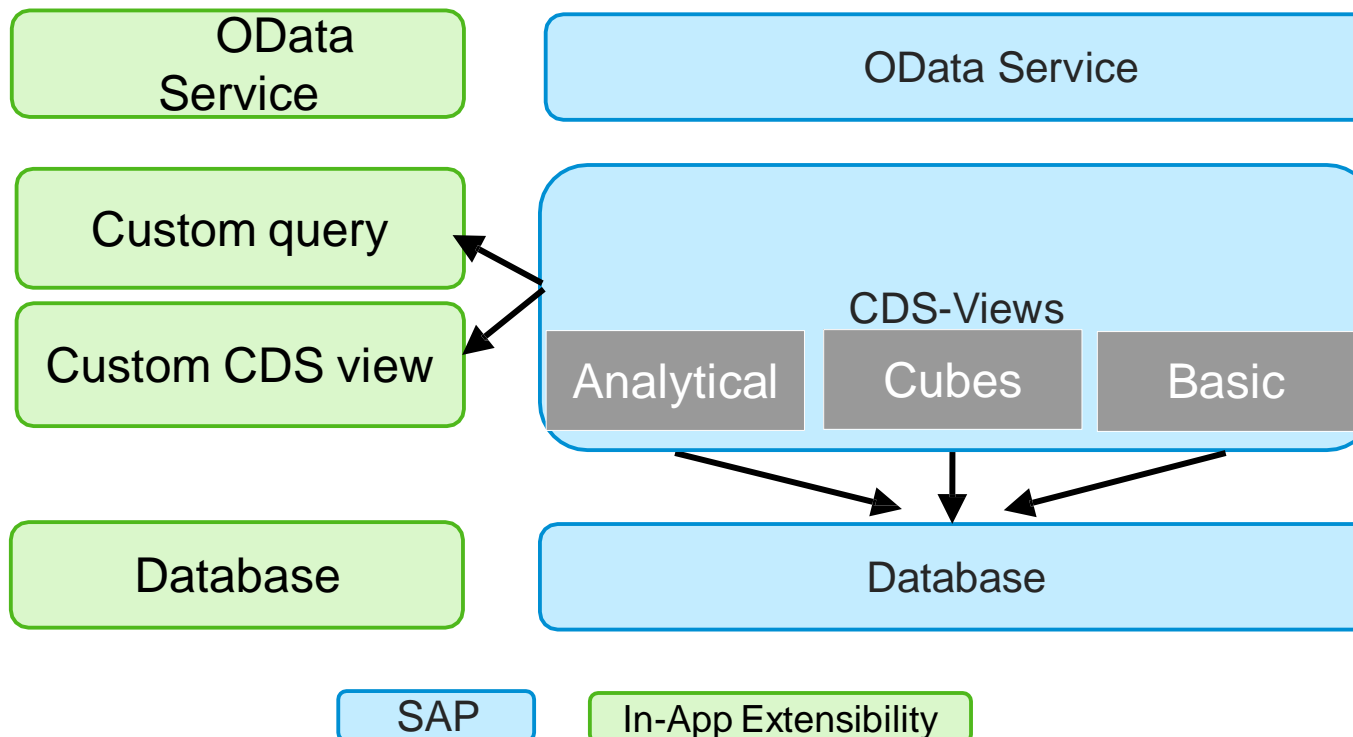

# SAP S/4HANA In-App Extensibility:

## Custom Reporting

### Custom Reporting

I3 Analytics / Forms

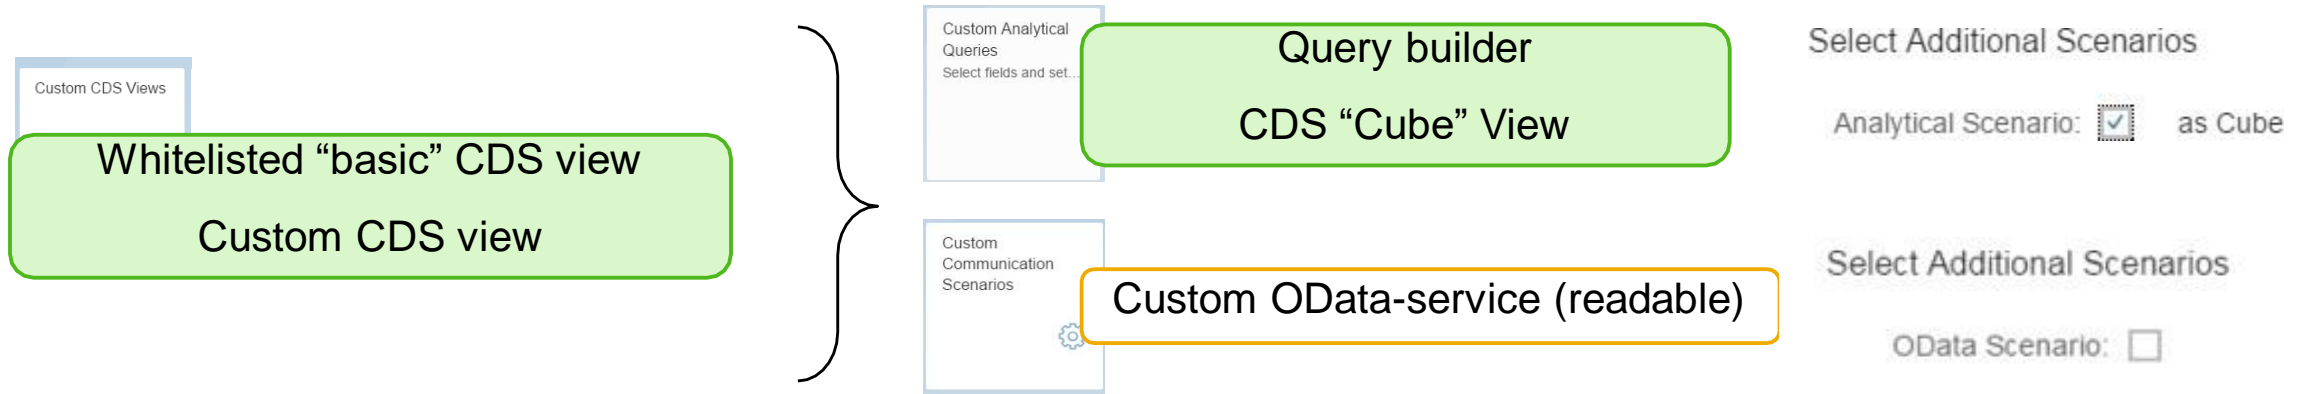

Extend the standard reporting

- Use SAP queries or cubes to define your own custom query
- Use > 700 released basic CDS views or cubes to define your own custom CDS view and
  - generate a custom cube,
  - design a KPI reporting,
  - or generate an external called OData service

# Custom CDS Views

Custom CDS views are based on whitelisted „I\_“ views (basic views)

General >>> Field Selection >>> Field Properties >>> Parameters >>> Filters

# SAP S/4HANA Cloud In-App Extensibility: Customer Development Extensions

## Develop you extension in ABAP

- Define own data object structures (custom tables) and add business logic in ABAP.
- A Fiori UI can be automatically generated and adapted with the WEB IDE
- Use business logic (e.g. BADIs) to run actions or validate the entries
- use your business object to create your custom OData services (read/write)
- Maintain custom tile on Launchpad
- Associate to custom fields or other custom business objects

# Custom Business Objects

- Use as external OData Service
- Use for association to other business objects or custom fields
